

Intervento TSF:

Soluzioni e Strumenti ICT a supporto dei sistemi di traffico urbano (oppure della mobilità urbana)

ICT support to local transport (and support to moving persons)

Mr. Claudio Sordi

An integrated web based system that manages “real time” data and information about train journey, also providing related and accurate “on board” information to passengers (i.e.: train journey, convoy location, train delay, estimated arrival time, special messages, etc.). Infotren has been installed on more than 650 Trenitalia S.p.A. trains (the major Italian Railway operator) and has been implemented using the most advanced information and communication technologies for a very high performing and secure integrated system.
